

## PAC-ALU profile HS cover

### Basic info

The extrusion PAC-ALU with LED light source is mostly used for interior lighting, especially to light cabinets, glass-cases, or as a decoration light for a niche in drywall ceilings. The angular extrusion is made from high quality, double-anodized aluminum, designed for flexible or rigid LED strips that are 8 - 12,8 mm wide. One of the accessories offered for this extrusion are covers that shade and protect LEDs inside the profile. There are a few types of covers offered: cover K12 (frosted or transparent) or HS12 (frosted or transparent). Covers are made of polycarbonate, and additionally, HS12 covers are certified for excellent resistance to all weather conditions, UV radiation as well as being flame retardant. Standard polypropylene end caps are used for the extrusion as supplementary accessories. End caps protect the extrusion from dust and other undesirable elements, which can make LED strips dirty and consequently deteriorate the lighting parameters. The extrusion can be mounted to surfaces with the use of mounting glue or screws which guarantee easy and secure mounting of the extrusion to a desired surface.
