

LARKO profile HS 22 cover

Basic info

Architectural profiles for LED fixtures – dedicated for ceilings and drywalls. The height of the profiles was designed in the way, that they can produce a single line of light with two LED strips where the diodes are spaced 15mm apart and a frosted HS 22 cover is used. The source of light is one or two 10 mm-wide LED strips. Surface mounting is performed with the use of mounting springs.

Assembly remarks - The bottom side of the LARKO profile extends beyond the left side of the drywalls, interfering with the construction elements.

Mounting across the ceiling structure calls for the use of additional spacer 'bars'.
