

TAMI anodized profile

Basic info

TAMI profile is the economical equivalent of a standard MICRO profile. The profile is matched by the springs or mounting brackets from our standard offer. The cover designed for TAMI profile is mounted by the "click" or slid into the profile from the side. Its surface has a soft satin structure. The profile can be equipped with end caps in the economical version, white and without holes for a cable. Inserted end caps on both ends of the profile take 16 mm of the cover (8mm for each end cap).
