

PCV KRAV 56 end cap

Basic info

KRAV 56 end caps consist of two overlapping parts that are assembled individually into the KRAV-D56 extrusion and KRAV-Z56. This type of end cap construction enables to hide the gap that is created when thicker glass is assembled into the extrusion. End caps can be mounted before or after the moment, the glass is inserted into the extrusion. This activity needs to be performed with care to avoid damaging the delicate grips of the end caps.

Technical parameters

Material	plastic
Color	light grey
