

TEKNIK clip

Basic info

TEKNIK CLIP – a plastic element which fits into a SMALL FASTENER inside extrusions. It is designed for ‘snap in’ mounting. It can also be attached to holes of a diameter 4 mm, made in hard surfaces, preferably with a thickness of 1 mm up to 1.5 mm. For one meter of extrusion, it is recommended to use four clips for fasteners in holes or single row mounting baseboard or three pairs of clips for fasteners in TEKNIK profile and double row mounting baseboard. Clips should be fitted in parallel when used in double row applications. Fixtures mounted by TEKNIK clips cannot reach temperatures higher than 100°C.
